Response to Amendment

1. Applicant's amendment filed 01/17/2006 has been entered and carefully considered.

Claims 1, 25, 27, 28, 30-37 have been amended.

Examiner's Amendment

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The applicant has been amended as follows:

Claim 31, line 1, "3034" has been changed to -31--.

Reasons for Allowance

3. Claims 1-37 are allowed.
4. The following is a statement of reasons for the indication of allowable subject matter:

Regarding claim 1, none of the prior art of record teaches or suggests the combination of a method for increasing measuring accuracy for a limited path by using a measuring system having a sensor and a scale having path events, wherein the method comprising the steps of: during at least one learning phase, moving the sensor relative to the scale so as to form a map of actual geometric intervals of the path events; and subsequent to the at least one learning phase, moving the sensor and the scale relative to each other and detecting the path events during a measuring phase, the path events

being reproduced by the sensor as electric signals, and determining a measured path as a function of the detecting of the path events and the map. It is these limitations as they are claimed in the combination with other limitations of claim, which have not been found, taught or suggested in the prior art of record, that make these claims allowable over the prior art.

Regarding claim 35, none of the prior art of record teaches or suggests the combination of a method for increasing measuring accuracy for a limited path by using a measuring system having a sensor and a scale having path events, wherein the method comprising the steps of: during at least one learning phase, moving the sensor relative to the scale so as to form first stored values, a map of actual geometric intervals of the path events over the limited path capable of being formed as a function of the first stored values; subsequent to the at least one learning phase, moving the sensor and the scale relative to each other and detecting the path events during a measuring phase, second values corresponding to the path events during the measuring phase being generated as function of electric signals from the sensor; and determining a geometric location along the limited path of at least one of the path events detected during the measuring phase as a function of the first stored values and the second values. It is these limitations as they are claimed in the combination with other limitations of claim, which have not been found, taught or suggested in the prior art of record, that make these claims allowable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
